

# app.install

## Description

This event is sent to the [event listener URL](#) when an app has been successfully installed by a user.

```
{
  "name": "app.install",
  "userId": "u:cfc76545-3400-4864-892a-513a9f4ae409",
  "token": "4458f0a9-eca7-4efb-8560-2a0fd3ac858d"
}
```

### Caution!

While no return value is expected from the app, if your app does not respond to the HTTP request with a 200 OK status code, Flock assumes that the installation has failed and will indicate as much to the user.

## Event Attributes

Name	Type	Description
userId	String	<a href="#">User identifier</a>
token	String	<a href="#">Authentication token</a> for the user

## Response

No return value is required for this event. However, a 200 OK status code *is* expected for the installation to be considered successful. In case a 200 status code is not received as response to this event, Flock will assume that the install failed.
